College of Business

University Wide Undergraduate Minor in Sustainability

The 18-credit university-wide undergraduate minor in sustainability consists of an interdisciplinary set of course offerings. Students choose courses from two or more of their college's existing sustainability course offerings in one of three tracks, that we call the Matrix of Options. The program allows students from many areas of study to explore the challenges of sustainability and develop their understanding of the economics, science, and equity issues involved in local and global sustainability. The minor helps students prepare for a career in sustainability. The minor draws upon disciplines of study across the university. Advising for the minor is currently available in Anthropology, Engineering Technology and Management departments.
